Professional Two-Way Radio Manufacturer

GLOHE is a China-based two-way radio manufacturer supporting distributors, brands and communication solution providers with standard products and OEM/ODM services.

Profile	Details
Established	2009
Company	GLOHE Communication Technology (Xiamen) Co., Ltd.
Manufacturing base	Quanzhou, Fujian Province, China
Facility	Approximately 7,000 square meters
Team	More than 300 employees
Global reach	Customers in more than 80 countries and regions

What We Do

GLOHE develops and manufactures professional two-way communication products for distributors, brands, solution providers and industry users. Our product portfolio spans conventional radio, digital communication and wide-area cellular push-to-talk.

Our focus: dependable products, responsive customization and long-term cooperation built around the customer's market.

Product Portfolio

Analog Two-Way Radios

Straightforward push-to-talk communication for local teams, daily operations and established radio environments.

DMR Digital Radios

Digital mobile radio solutions for clearer audio, efficient channel use and structured user groups.

Push-to-Talk over Cellular (PoC)

Wide-area communication over cellular data networks for mobile teams, fleets and distributed operations.

Repeaters, Mobile Radios and Accessories

Coverage extension, in-vehicle communication and supporting accessories that help complete the operational system.

Category	Typical operating need
Analog	Simple local voice coordination
DMR	Digital clarity and scalable groups
PoC	Regional or nationwide mobile teams
Repeater	Coverage support in complex sites
Mobile radio	Vehicle-based dispatch and coordination

Manufacturing, Quality and Customization

OEM and ODM Capability

GLOHE accepts OEM and ODM projects, from branding and packaging to product configuration and deeper development. An in-house manufacturing base supports coordinated sampling, production and quality control.

Quality Framework

The GLOHE website lists CE, FCC, RCM, RoHS and BSCI certifications, together with the ISO 9001 quality management standard. Certification applicability must be confirmed for the exact model, configuration and destination market.

A Practical Project Flow

- Requirement review and market definition
- Product or platform selection
- Sample preparation and field validation
- Artwork, documentation and compliance confirmation
- Production, inspection, delivery and after-sales support
